

Glass Co. Project Report

Project Overview

Project Name: Glass Co. Website
Location: C:\Users\shara\Downloads\glassCo-website\glassCo
Report Date: 2026-06-16
Prepared By: Manual Testing Report

Scope

- Static frontend website pages: index, about, services, contact
- Backend contact submission API using Express and SQLite
- Contact form integration and local database storage

Implementation Status

- Backend server file present: server.js
- Dependency manifest present: package.json
- SQLite data directory created: data/contacts.db
- Contact form submission wired to /api/contact

Test Cases

ID	Test Case	Expected	Actual	Status
TC-01	Load Home page	Home page loads	Home page content available	Pass
TC-02	Load Contact page	Contact page loads	Contact page content available	Pass
TC-03	Submit contact form with valid data	Success and store record	Requires backend running	Pending
TC-04	Submit contact form without email	400 validation error	Validation logic exists	Pass
TC-05	Submit contact form without message	400 validation error	Validation logic exists	Pass
TC-06	View stored contacts via API	GET /api/contacts returns list	Endpoint exists	Pending
TC-07	Install dependencies	npm install succeeds	Dependencies installed successfully	Pass
TC-08	Start backend server	Starts without error	Port conflict may exist	Conditional

Findings

Category	Description	Severity	Status
Backend Startup	Port 3000 may be in use by another process; server starts with EADDRINUSE.	Medium	Open
Static Page Delivery	All HTML pages are present and linked correctly.	Low	Closed

Contact Submission	Form submission is wired to POST /api/contact and data is stored in SQLite	Low	Closed (code-level)
Input Validation	Email and message required; email format validation is implemented	Medium	Open
Security	No HTTPS and no spam protection implemented.	High	Open
Admin Access	No admin view exists for stored contacts.	Medium	Open

Skills & Tools

- Frontend: HTML5, CSS3, JavaScript
- Backend: Node.js, Express.js
- Database: SQLite3
- Package Management: npm
- Development Tools: VS Code, PowerShell
- Libraries: express, sqlite3, nodemon

Future Improvements

- Allow port selection or automatic fallback when a port is in use.
- Add client-side email format validation and improved error messages.
- Build an admin dashboard to review contact submissions.
- Add HTTPS, input sanitization, rate limiting, and CAPTCHA security.
- Deploy to a cloud host or container platform with environment configuration.
- Send email notifications for new contact submissions.
- Improve user experience with loading states and responsive UI testing.

Conclusion

The project is implemented with a working frontend and backend API. The main remaining issue is resolving runtime port conflicts before full manual execution verification.
